Summary

Full-stack developer with hands-on experience building and testing web applications across React, Next.js, Node.js, and PostgreSQL stacks. Adept at identifying application-layer vulnerabilities, implementing authentication security, and architecting clean, maintainable codebases. Combines a developer's insight into code structure with a security analyst's mindset to conduct thorough manual application reviews — going beyond automated tooling to reason about business logic flaws, auth bypasses, and data exposure risks. Pursuing a growth opportunity in application penetration testing and vulnerability assessment.

Experience

Tata Starbucks
Barista Trainer

November 2022 - May 2025
Pune

- Optimized complex workflows and 'operational logic' to reduce service latency and ensure minimal disruption to daily business metrics
- Acted as the initial point of interaction for identifying and resolving process-level inaccuracies in cash flow and POS reconciliation
- Assisted new colleagues in understanding process nuances and technical standards to maintain high productivity targets
- Consistently exceeded internal audit standards by strictly adhering to organizational governance and defined workflows
- Communicated independently with diverse customers to provide tailored insights, lifting average transaction values through unique product knowledge

AV Corder
Administrative Assistant

June 2025 - August 2025
Pune

- Performed in-depth research and data-driven analysis to support team leads with relevant information for decision-making
- Streamlined administrative transactions and improved process documentation to enhance overall service delivery efficiency
- Provided critical assistance for cross-functional projects, ensuring all deliverables met the defined turnaround time
- Managed and designed digital assets to boost brand visibility while maintaining data integrity across social media platforms

Education

MIT World Peace University
Bachelor's in Computers Applications
7.6 CGPA

August 2023 - present
Graduation

Skills & Interest

- Languages & Frameworks:
 - JavaScript / TypeScript, React.js, Next.js, Node.js / Express, PostgreSQL, SSR, Data Visualization, TailwindCSS.
- Security Concepts:
 - JWT security, input validation, Server-Side Rendering security, secure coding principles, data integrity
- Soft Skills:
 - Technical report writing, client-facing communication, research & analysis, cross-functional collaboration, Problem Solving skills, Adaptability & Learning Agility, Effective time management
- Application Security:
 - Authentication vulnerabilities, session management flaws.

Languages

English, Hindi , Marathi

Certifications

Legacy Responsive Web Design V8 freeCodeCamp	July 2023
Data Visualization and Building dashboards with excel and congnos edx	March 2024
Machine Learning and Deep Learning NIT, Goa	June 2025

Projects

SHOPIFY REACT SITE

<https://github.com/nikita1-pixel/shopify-react-site>

Shopify React Site | E-commerce Workflow & Digital Integration

- Developed a high-performance e-commerce platform using ReactJs to manage complex product transactions and user workflows
- Implemented a dynamic product catalog system to ensure data integrity for inventory and pricing
- Minimized user wait times through efficient code architecture, supporting business metrics
- Built a responsive user interface that aligns with professional retail standards to enhance customer engagement
- Engineered the platform with a focus on clean code to simplify root cause analysis

AUTHPORTAL

<https://github.com/nikita1-pixel/AuthPortal>

AuthPortal | Secure Authentication & User Governance Platform

- Built a secure login and registration platform for user interactions
- Designed a custom security module to protect user identities and sensitive information
- Optimized the platform for speed using Server-Side Rendering
- Developed backend logic to manage user inputs and fix login issues
- Ensured the platform is easy to maintain and scale with clean architecture

CURD

<https://github.com/nikita1-pixel/crud>

CRUD Operations Platform | Full-Stack Development

- Engineered a robust application demonstrating full Create, Read, Update, and Delete capabilities
- Implemented efficient Database Management to handle persistent data storage
- Developed clean backend logic focusing on efficient data flow and error handling
- Built a scalable architecture bridging frontend user actions with backend data processing
